

# BRACHIAL PLEXUS

El Paso Children's Multispecialty Center provides a comprehensive approach to care for babies, children, adolescents and young adults with brachial plexus birth injuries and peripheral nerve disorders. We care for our patients from the time of injury through adulthood, tailoring therapies to assure each patient achieves their highest level of function and independence. This includes the latest techniques in physical therapy, surgery and microsurgery by plastic surgeons, neurosurgeons and orthopaedic surgeons who work as a team depending on your child's needs.
