

ENT

Otolaryngology is the medical specialty that deals with diseases and problems of the ear, nose, and throat (ENT). An otolaryngologist, often called an ENT, is a doctor who studies, diagnoses, prevents, and treats diseases and conditions of the ear, nose, and throat. We specialize in caring for a broad range of conditions, from ear infections to problems with hearing and speaking. We work closely with other specialty providers such as Audiology and Speech & Language Pathology to maximize effective treatment and management of complex medical needs.
